

Homework 1

السؤال الأول:

Question 1: Python Basics?

A-Define a list that contain the names of graduated students" 5 students at least":

Create a program that accept student name and prints if the user is graduated or not.

B- Generate and print a list of odd numbers from 1 to 1000.

Tips: "List Comprehension"

C- L=['Network' , 'Math' , 'Programming' , 'Physics' , 'Music']

In this exercise, you will implement a Python program that reads the items of the previous list and identifies the items that starts with 'P' letter, then print it on screen.

Tips: using loop, list 'len ()' method

D: Using Dictionary comprehension, Generate this dictionary d={1:1,2:4,3:9,4:16,5:25,6:36,7:42,8:64,9:81,10:100}

• حل A:

الكود :

```
1 a= ["zeinab","fatima","jana","hana","sara"]
2 b= input("enter a name")
3 if b in a:
4     print("graduated")
5 else:
6     print("not graduated")
```

الخرج:

```
enter a name zeinab
graduated
[Program finished]
```

• حل B:

الكود:

```
1 odd1= [i for i in range(0,1000)
2 if (i%2!=0)]
3 print(odd1)
```

السؤال الثاني:

Question 2: Convert from decimal to binary

Write a Python program that converts a decimal number into its equivalent binary number.

The program should start reading the decimal number from the user. Then the binary equivalent number must be calculated. Finally, the program must display the equivalent binary number on the screen.

Tips: use empty list to hold binary number, use loop, use % operator, use // operator, use list append method, reverse the list.

الكود:

```
1 a= int(input("enter a decimal number"))
2 b=[ ]
3 while (a!=0):
4     c=a%2
5     b.append(c)
6     a=a//2
7 b.reverse()
8 for i in range (0,len(b)):
9     b[i]=int (b[i])
10    print(b[i],end="")
```

الخرج:

```
enter a decimal number6
110
[Program finished]
```

السؤال الثالث:

"Working with Files" Quiz Program"

Quiz program that takes a text or json or csv file as input for (20 (Questions, Answers) and automatically computes and prints user results and store user name and result in separate file

الكود:

```
f1=open('e//zz.txt','r')
name=input('enter your name')
a=f1.readline()
b=0
for i in range (0,20):
    c=input('the answer')
    print(a)
    if c==a:
        b+=1
f1.close()
f2=open('e//aa.txt','w')
f2.write()
f2.close()
f2.close()
```
